EDULABS DIDACTIC

POWER ELECTRONICS TRAINER

EXPERIMENT 19

EXPERIMENTS MANUAL

Experimental objectives: the trainee is able to

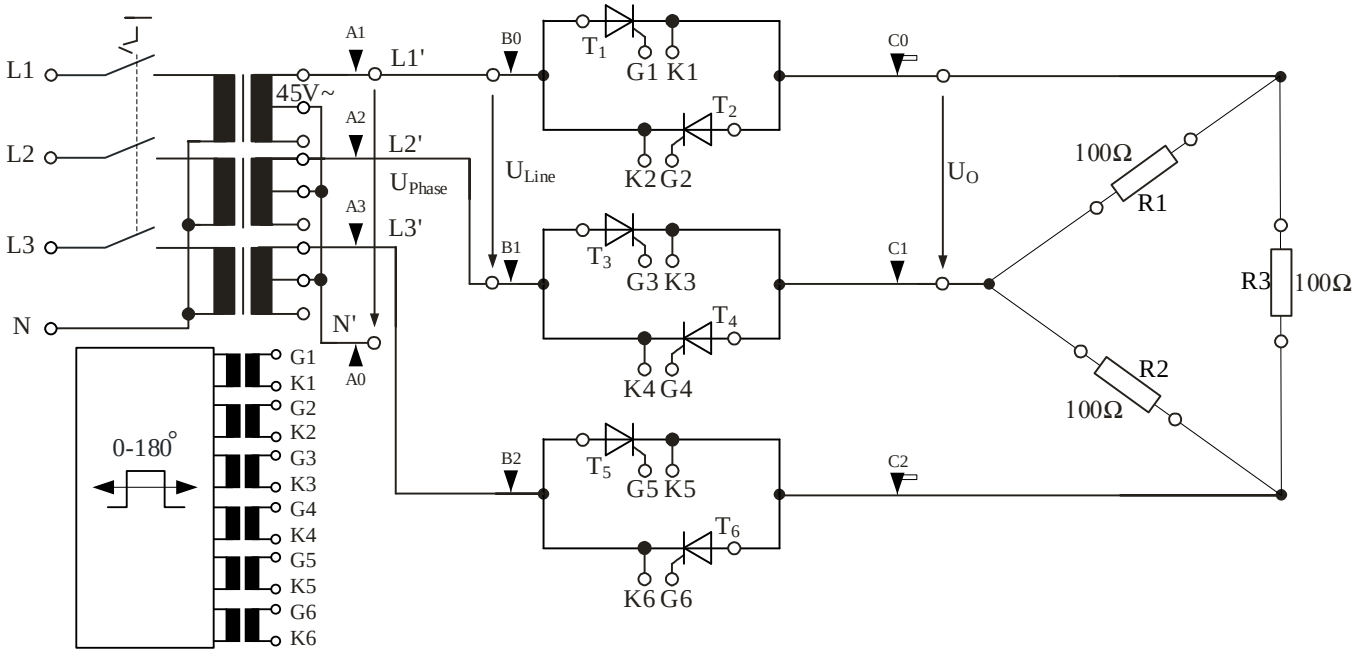
1. Determine the phase control characteristic of the delta–connected three phase bidirectional connection on resistive load

Equipment designation

No.	Item	Model	Quantity
1	Group Of SCR Module	EM-21-01-05	1
2	Six Pulse Controller	EM-21-02-02	1
3	Resistive Load Module (I)	EM-21-03-01	1
4	Three Phase AC Power Supply	EM-21-04-01	1
5	DC Power Supply	EM-21-04-02	1
6	19mm Shunt / Bridging Plug Set	EM-30-15-06	5
7	19mm Shunt / Bridging Plug Set (Stackable)	EM-30-15-08	3
8	2mm Stackable Test Lead Set (Banana Plug Type) (5 color coded)	EM-30-15-10	2
9	4mm Stackable Test Lead Set (Banana Plug Type)	EM-30-15-12	3
10	4mm Safety Stackable Connecting Lead	EM-30-15-01	1 set
11	Digital Storage Oscilloscope (Optional)	TDS-2102C	1

Procedure

1. Construct the circuit according to current diagram Figure 19.1



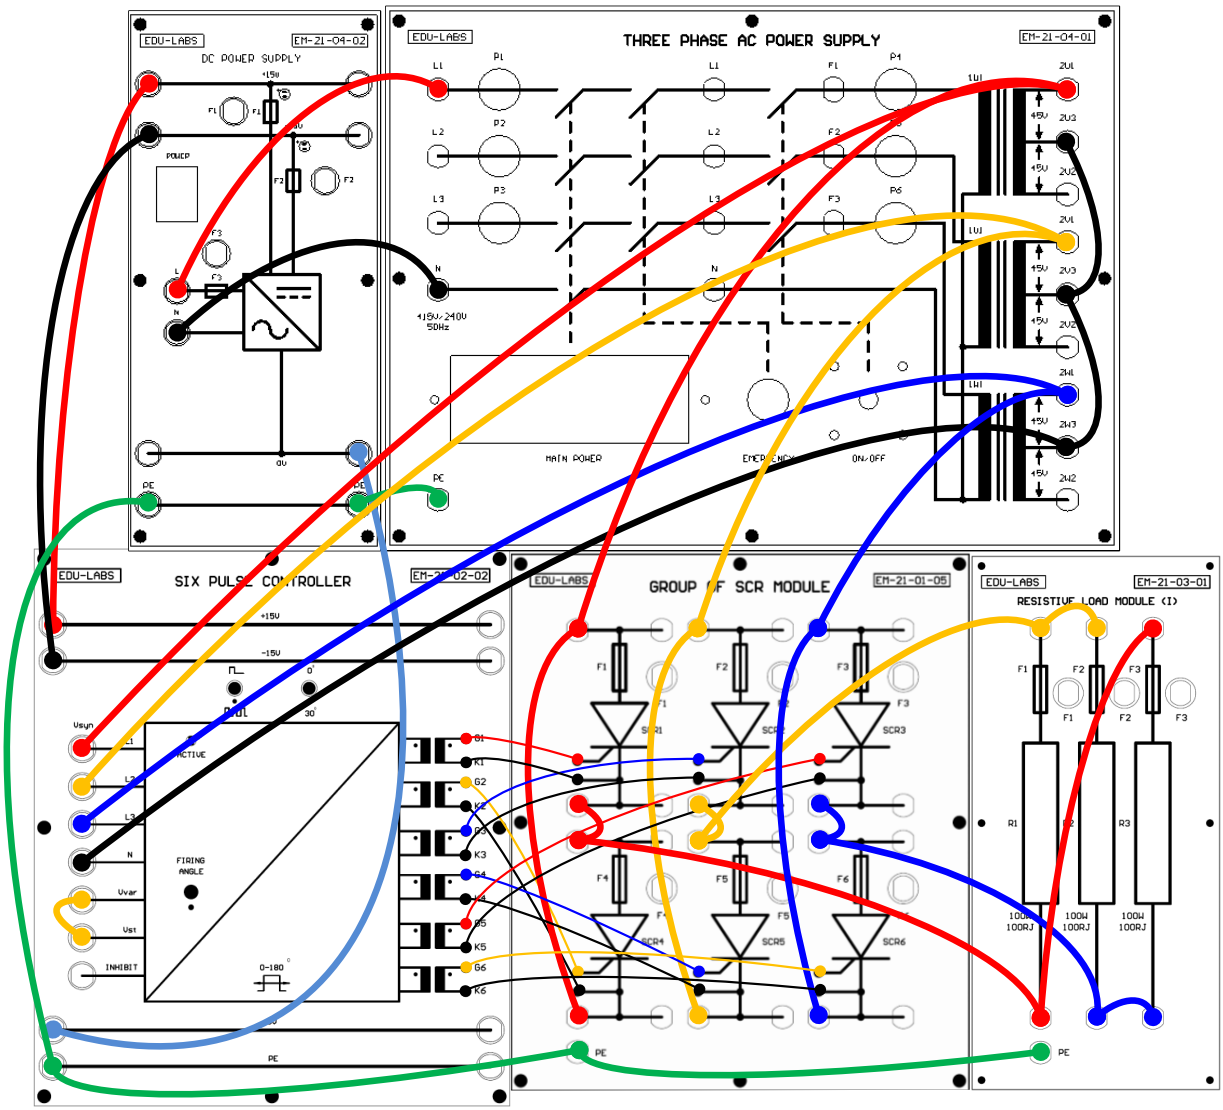


Figure 19.1 Current diagram for examine the phase control of the delta–connected three phase Bi-direction connection on resistive load

2. Connect the terminal of firing pulse transmitter to the corresponding gate and cathode terminal of SCR, relatively
   - G1, K1 to G1, K1 (to fire the pulse to the SCR on positive of phase L1')
   - G2, K2 to G2, K2 (to fire the pulse to the SCR on negative of phase L1')
   - G3, K3 to G3, K3 (to fire the pulse to the SCR on positive of phase L2')
   - G4, K4 to G4, K4 (to fire the pulse to the SCR on negative of phase L2')
   - G5, K5 to G5, K5 (to fire the pulse to the SCR on positive of phase L3')
   - G6, K6 to G6, K6 (to fire the pulse to the SCR on negative of phase L3')
3. Set the Six Pulse controller Module:
   – Pulse toggle: multi-pulse
   – Delay angle: 0º
   – Firing Angle VR: 0 percent(maximum counterclockwise)
4. Connect the AC power supply 45 V to the synchronization voltage (V_{syn}) of the Six Pulse Controller, relatively

- supply terminal; 2U1 to the synchronization voltage terminal; L1
- supply terminal; 2V1 to the synchronization voltage terminal; L2
- supply terminal; 2W1 to the synchronization voltage terminal; L3
- supply terminal; 2U3, 2V3, 2W3' to the synchronization voltage terminal; N'

5. Connect the DC voltage supply ± 15 V to Six Pulse Controller.
6. Interconnect the firing pulse transmitter terminal between V_{st} and V_{set}
7. Switch on both Three Phase AC power supply and DC power supply.

Oscilloscope probe connection Procedure

Refer to Figure 19.1 while connecting.

Since all oscilloscope channels have common ground (GND), therefore:

1. To capture the phase voltage waveforms **U $_{phase}$** connect (A1 – A0) to CH1, (A2 – A0) to CH2, and (A3 – A0) to CH3. Record the waveform into **Experimental Table 19.1-1**. Remove the connection after capturing the waveforms.

Note: Line voltage waveforms U $_{line}$ cannot be capture together as they do not share the same reference point. Shot circuit will occur if they were connected to the oscilloscope together.

2. To capture the line voltage L1 connect (B0 – B1) to CH1. Record the waveform into **Experimental Table 19.1-2**. Remove the connection after capturing the waveforms.
3. To capture the line voltage L2 connect (B1 – B2) to CH2. Record the waveform into **Experimental Table 19.1-2**. Remove the connection after capturing the waveforms.
4. To capture the line voltage L3 connect (B0 – B2) to CH3. Record the waveform into **Experimental Table 19.1-2**. Remove the connection after capturing the waveforms.

Note: Line voltage waveforms U $_{o}$ cannot be capture together as they do not share the same reference point. Shot circuit will occur if they were connected to the oscilloscope together.

5. To capture the line voltage R1 connect (C0 – C1) to CH1. Record the waveform into **Experimental Table 19.1-3**. Remove the connection after capturing the waveforms.
6. To capture the line voltage R2 connect (C1 – C2) to CH2. Record the waveform into **Experimental Table 19.1-3**. Remove the connection after capturing the waveforms.
7. To capture the line voltage R3 connect (C2 – C0) to CH3. Record the waveform into **Experimental Table 19.1-3**. Remove the connection after capturing the waveforms.

IMPORTANT!!!

Switch off the circuit when changing the connection probe as safety precaution. Negligence of the Oscilloscope procedure will cause damage to the oscilloscope and the modules due to short circuit.

8. Capture the waveform Uo with different firing angle as in Experimental Table 19.1-3.
9. Switch off the power supplies.

NOTE: THE RESISTOR WILL HEAT UP WHEN EXPERIMENTING

Experimental Table 19.1.1

Description	Waveform U $_{phase}$

Expected Result Table 19.1.1

Description	Waveform U $_{phase}$
Separate waveform CH1(Yellow) = phase 1 CH2 (Blue)= phase 2 CH3 (Violet)= phase 3	 **Phase shift in between each phase 120° phase angle.**
Merged waveform CH1(Yellow) = phase 1 CH2 (Blue)= phase 2 CH3 (Violet)= phase 3

WARRANTY AND STANDARD CONDITIONS OF SALE

The Seller warrants to the Purchaser that any equipment manufactured by it and bearing its name plate to be free from defects in material or workmanship, under proper and normal use and service, as follows: If, at any time within one (1) year from the date of shipment, the Purchaser notifies the Seller that in his opinion, the equipment is defective, and returns the equipment to the Seller's originating factory prepaid, and the Sellers inspection finds the equipment to be defective in material or workmanship **except part like switches, knob, push button, lighting, etc.** the Seller will promptly correct it by either, at its option, repairing any defective part or material or replacing it free of charge and return shipping lowest cost transportation prepaid by purchaser (if Purchaser requests premium transportation, Purchaser will be billed for difference in transportation costs). If inspection by the Seller does not disclose any defect in material or workmanship, the Seller's regular charges will apply. This warranty shall be effective only if use and maintenance is in accordance with Seller's instructions and written notice of a defect is given to the Seller within such period. **THIS WARRANTY IS EXCLUSIVE AND IS IN LIEU OF ANY OTHER WARRANTIES, WRITTEN, ORAL OR IMPLIED. SPECIFICALLY, WITHOUT LIMITATION, THERE IS NO WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE**. The liability of the Seller shall be limited to the repair or replacement of materials or parts as above set forth.

LIMITATION OF LIABILITY

The Seller shall not be liable for any claim or consequential or special loss or damage arising or alleged to have arisen from any delay in delivery or malfunction or failure of the equipment. The Seller's liability for any other loss or damage arising out of or connected with the manufacture or use of the equipment sold, including damage due to negligence, shall not in any event exceed the price of the equipment supplied by Seller.

GENERAL CONDITION

All orders are subject to acceptance by Seller at its Main Office. Stenographic and clerical errors are subject to correction. No oral or subsequent modification or any other foregoing general provisions or of any term or condition of any order shall be binding unless agreed to in writing by the Seller and Purchaser.

SCIENSCOPE SDN BHD reserves the right to make changes at any time, without notice, in prices, colors, materials, specifications and models, and also to discontinue models.
